

# Orin Nx Installation and Update Notes

**Users who purchased after October 17, 2025, can skip this tutorial. Customers who purchased before October 17, 2025, please note:**

If you need to run the **upgrade** command or click the pop-up window to update the system, you must execute the following command before running it. Otherwise, the system will not boot after the update.

```
sudo apt update
sudo apt install cpio
```

Run the above commands before upgrading.

```
sudo apt upgrade
sudo apt-get upgrade
```

2. If you updated the system using the desktop pop-up prompt, after clicking install, you must run the following command before shutting down and restarting the system. Otherwise, the system will not boot after restarting.

```
sudo apt update
sudo apt install cpio
sudo apt upgrade
```

## Solution for a system failure after a system update:

1. If you wish to continue using our image, first refer to **[02. Jetson basic course]-[05. Restore initial image system]**, prepare your own SSD enclosure, and re-burn the SSD image. If the system still fails to boot after re-burning the SSD image, refer to **[02. Jetson basic course]-[07. Write SUPER boot (official kit must read)]** to burn the super boot. Finally, check if the system boots.
